Target Antigen: Transmembrane protein 37 antibody

Host Organism: goat

Clonality: polyclonal

Comments: Discontinued; manufacturer recommendations: Preliminary experiments gave an approx 26-28kDa band in Human Brain (Cerebellum, Frontal Cortex and Hippocampus) lysates after 0.1µg/ml antibody staining. Please note that currently we cannot find an explanation in the literature for the band we observe given the calculated size of 20.9kDa according to NP_899063.2. The 26-28kDa band was successfully blocked by incubation with the immunizing peptide. We would appreciate any feedback from people in the field - have any results been reported with other antibodies/lysates? Have any further splice variants/modified forms been reported? ELISA.; ELISA
