Warning: Authors state: "As the majority of downregulated genes were factors expressed by the endoderm, we investigated endoderm specification and morphogenesis in more detail. We observed high levels of non-specific antibody staining, including for BRACHYURY and N-CADHERIN in the Rreb1-/- VE. Such non-specific staining is often observed in the VE of wild-type embryos prior to intercalation of the DE (Kwon et al., 2008; Morgani et al., 2018a), which has ben attributed to its extensive vacuolation." Immunofluorescence, Western blot
