Comments: Please visit <https://www.biorxiv.org/content/10.1101/2020.05.11.089300v1> for bioRxiv preprint. Parent vector is described in "Optimized cassettes for fluorescent protein tagging in Saccharomyces cerevisiae", Mark A Sheff , Kurt S ThornYeast 2004 Jun;21(8):661-70. doi: 10.1002/yea.1130. The parent vector was intended for GFP tagging of yeast proteins. We placed the TEF2 promoter directly upstream of GFP for sugar-insensitive expression of GFP under galactose or dextrose conditions.
