Vector Backbone Description: Backbone Size:7400; Vector Backbone:pLEF; Vector Types:Mammalian Expression; Bacterial Resistance:Ampicillin

Comments: Constructed by Suparna Mishra. Generated in a 3-way ligation consisting of 5' 0.75 kb BamHI/Sal I + 3' 6.3 kb Sal I/EcoRI BCR/ABL fragments into pLEF digested with BamHIxEcoRI. The ABL part of the insert contains the natural TAG and 3' UT sequences. Addgene NGS identified a sequence discrepancy at nucleotide 3168 resulting in a T117M mutation in the ABL-1 sequence, relative to Genbank ID NP_005148.2 and Addgene Plasmid #38158. This is not a known polymorphism and the effect of this, if any, on the protein is not known.
