Comments: This plasmid is an empty vector. Your gene can be inserted with a LIC cloning protocol. mOrange has a excitation max of 548 nm and an emission max of 562 nm. A TEV-cleavable MBP will be added to the N-terminal side of your protein to enhance solubility. To clone into this vector, add LIC tags to the 5' end of your PCR primers. Forward - 5'TACTTCCAATCCAATGCA3' Reverse - 5'CTCCCACTACCAATGCC 3' Do NOT include a stop codon with your reverse primer. Linearize the plasmid with SspI, then gel purify. When digesting the DNA with T4 polymerase, use dCTP for the insert and dGTP for your linearized vector. More information on this vector can be found through <http://qb3.berkeley.edu/qb3/macrolab/>
