Proper Citation: RRID:Addgene_49184

Bacterial Resistance: Ampicillin

Defining Citation: [PMID:24215641](#)

Vector Backbone Description: Vector Backbone:pFA6a; Vector Types:Yeast Expression; Bacterial Resistance:Ampicillin

Comments: Note that there are two adenines in Addgene's T7 quality control sequence that introduce a HindIII site and an AflII site into the plasmid. Note that these discrepancies with the depositor sequence do NOT affect the function of the plasmid. The vector is used as a template for PCR to amplify DNA cassettes to modify chromosomal gene loci. The additional adenines are not within the primer sequences to amplify DNA cassettes for gene manipulation.
