Proper Citation: AnimalTFDB (RRID:SCR_001624)

Description: A comprehensive transcription factor (TF) database in which they identified and classified all the genome-wide TFs in 50 sequenced animal genomes (Ensembl release version 60). In addition to TFs, it also collects transcription co-factors and chromatin remodeling factors of those genomes, which play regulatory roles in transcription. Here they defined the TFs as proteins containing a sequence-specific DNA-binding domain (DBD) and regulating target gene expression. Currently, the AnimalTFDB classifies all the animal TFs into 72 families according to their conserved DBDs. Gene lists of transcription factors, transcription co-factors and chromatin remodeling factors of each species are available for downloading., THIS RESOURCE IS NO LONGER IN SERVICE. Documented on September 16,2025.

Abbreviations: AnimalTFDB

Synonyms: Animal Transcription Factor Database

Resource Type: data or information resource, database

Defining Citation: [PMID:22080564](#)

Keywords: transcription factor, dna-binding domain, transcription co-factor, chromatin remodeling factor, gene structure, functional domain, go annotation, protein interaction, ortholog, paralog, 3d structure, pathway, protein-protein interaction, binding site, target, data set, image collection, 3d spatial image, bio.tools, FASEB list

Funding: Huazhong University of Science and Technology; Wuhan; China ;
