Proper Citation: International Society for Magnetic Resonance in Medicine (RRID:SCR_001988)

Description: The International Society for Magnetic Resonance in Medicine is an international, nonprofit, scientific association whose purpose is to promote communication, research, development, and applications in the field of magnetic resonance in medicine and biology and other related topics and to develop and provide channels and facilities for continuing education in the field. In addition to its large scientific meetings, the Society holds workshops and publishes two journals, Magnetic Resonance in Medicine and the Journal of Magnetic Resonance Imaging, and a newsletter, MR Pulse. It also sponsors study groups on specific areas of scientific interest and chapters based on geographical location. Its multidisciplinary membership of over 6,000 consists of clinicians, physicists, engineers, biochemists, and technologists. The ISMRMs inception, on January 1, 1994, resulted from a merger of the Society of Magnetic Resonance in Medicine and the Society of Magnetic Resonance Imaging forming the Society of Magnetic Resonance (now named the International Society for Magnetic Resonance in Medicine). The purposes of the Society are: (A) (i) To promote communication, research, development, applications, and the availability of information on magnetic resonance in medicine and biology and other related topics internationally; (ii) To develop and provide channels and facilities for continuing education and communication in the field, to publish and assist in the publishing of journals and other publications in the field; and (iii) To provide information and advice on those aspects of public policy which are concerned with magnetic resonance in medicine and biology and other related topics, and otherwise perform charitable, scientific and educational functions with respect to magnetic resonance applications in medicine and biology and other related topics. (B) To work with or for, and to co-operate with local, regional and national governments and governmental and private agencies, organizations, firms and institutions in efforts to accomplish one or more of the above purposes. (C) To ensure that scientists and clinicians working in the field have

equal and fair opportunities to contribute to it. The site lists a partial list of NMR and MRI resources available on the World Wide Web. The content of these sites is not controlled or endorsed in any way by the ISMRM or SMRT. Sections devoted to MR safety and MRI information for patients is also available. Study groups are established to foster interaction among members with a common interest in topical and active areas of MR. If you are a member of the ISMRM or SMRT, you may become a member of any number of study groups; however, the cost of membership for each study group is US\$20. Recorded educational presentations, oral presentations, traditional posters, and electronic posters Available only to Meeting registrants - Now online
