Proper Citation: QUEST Project (RRID:SCR_002247)

Description: A program of regional geochemical and geophysical surveys designed to attract the mineral exploration industry to an under-explored region of British Columbia between Williams Lake and Mackenzie. The QUEST Project is focused on the Quesnel Terrane, which has good potential for copper and gold porphyry deposits, but in this region is covered by a thick layer of sand and gravel left behind by glaciers. Geoscience BC's QUEST Project included two airborne geophysical surveys: an airborne electromagnetic (EM) survey and an airborne gravity survey, which give insight into the conductivity and density of the rocks. The results of the two airborne surveys are an important tool for industry looking to understand the geology in the QUEST Project area. The QUEST Project also included the reanalysis of almost 5000 archived regional geochemical samples from parts of NTS sheets 93A, B, G, H, K and N, and the collection of 2200 new geochemical samples north and west of Prince George. This new geochemical data is helping industry to identify new exploration targets. Subsequent follow-up work has included analysis and inversion of datasets and updating the regional bedrock geology map.

Abbreviations: QUEST

Synonyms: QUEST: Quesnellia Exploration Strategy

Resource Type: data or information resource, data set

Keywords: geochemical, geophysical, geoscience, survey, sediment, airborne, electromagnetic, gravity, map, conductivity, density, rock

Funding: Geoscience BC ;
Northern Development Initiative Trust

Resource Name: QUEST Project

Resource ID: SCR_002247

Record Creation Time: 20220129T080212+0000

Record Last Update: 20260806T054335+0000

Ratings and Alerts

No rating or validation information has been found for QUEST Project.

No alerts have been found for QUEST Project.
