Description: The Neuroscience Graduate Program at Loyola trains students to become the neuroscientists who will carry on exciting research. Since our program is interdepartmental and interdisciplinary, our students have an exceptionally broad choice of advisors and research topics on which to work. The neuroscience program offers a Ph.D., M.D./Ph.D., and Masters degree. Our students begin working towards their doctorate in neuroscience by first obtaining a broad base of knowledge in the whole field of neuroscience--brain anatomy, physiology, biochemistry, and pharmacology. After selecting a research advisor at the end of the first year, students usually take several electives in the advisor's home department to develop specialization and strength in one particular area. Each student is exposed to various situations where he or she learns how to express their ideas effectively, whether at a graduate seminar or as a teaching assistant in the medical neuroscience course. Throughout their training, students have the opportunity to interact and work closely with faculty and to receive individualized attention that continues until degree completion.
