Description: THIS RESOURCE IS NO LONGER IN SERVICE, documented May 10, 2017. A pilot effort that has developed a centralized, web-based biospecimen locator that presents biospecimens collected and stored at participating Arizona hospitals and biospecimen banks, which are available for acquisition and use by researchers. Researchers may use this site to browse, search and request biospecimens to use in qualified studies. The development of the ABL was guided by the Arizona Biospecimen Consortium (ABC), a consortium of hospitals and medical centers in the Phoenix area, and is now being piloted by this Consortium under the direction of ABRC. You may browse by type (cells, fluid, molecular, tissue) or disease. Common data elements decided by the ABC Standards Committee, based on data elements on the National Cancer Institute's (NCI's) Common Biorepository Model (CBM), are displayed. These describe the minimum set of data elements that the NCI determined were most important for a researcher to see about a biospecimen. The ABL currently does not display information on whether or not clinical data is available to accompany the biospecimens. However, a requester has the ability to solicit clinical data in the request. Once a request is approved, the biospecimen provider will contact the requester to discuss the request (and the requester's questions) before finalizing the invoice and shipment. The ABL is available to the public to browse. In order to request biospecimens from the ABL, the researcher will be required to submit the requested required information. Upon submission of the information, shipment of the requested biospecimen(s) will be dependent on the scientific and institutional review approval. Account required. Registration is open to everyone., documented September 6, 2016. Sage Bionetworks video podcasts feature the plenary talks from the April 2011 Commons Congress in San Francisco. The Keynote and project update video posts are in reverse chronological order; the full agenda is available at www.sagecongress.org. There are also several excellent podcasts from the January 2011 Symposium on Human Data Interoperability. The podcasts are also available on iTunes where you can subscribe and receive new podcasts automatically when posted. Upcoming posts will feature presentations and interviews on network biology, genomics, healthcare and open science.

All these podcasts feature research and thought leaders as well as policy advocates, scientists working at the coal-face and patients. The topics span technical and strategic issues and include fact and opinion. The goal is to engage, educate and inspire non-scientists and scientists alike.
