Proper Citation: Young Mania Rating Scale (RRID:SCR_003700)

Description: An eleven-item, multiple-choice diagnostic questionnaire which psychiatrists use to measure the severity of manic episodes in patients. The scale was originally developed for use in the evaluation of adult patients who were suffering from bipolar disorder, but has since been modified for use in pediatric patients. A similar scale was then developed to allow clinicians to interview parents about their children's symptoms, in order to ascertain a better diagnosis of mania in children. Clinical studies have demonstrated the effectiveness of the parent version of the scale. The scale provided is in a slightly reworded form as a self-assessment. This may not be as accurate when self-administered, as people suffering from mania are often unable to properly assess relevant outward symptoms.

Abbreviations: YMRS

Synonyms: Young Mania Rating Scale (YMRS)

Resource Type: assessment test provider, material resource

Keywords: adult human, pediatric, child, young human

Related Condition: Mania, Hypomanic system, Bipolar Disorder
