Description: THIS RESOURCE IS NO LONGER IN SERVICE, documented on February 08, 2013. A biorepository containing thousands of biosamples from international pharmas, biotechs, hospitals, medical centers, private physicians and universities. As a part of our custodial activities, we have on-site power generators, extra supplies of liquid nitrogen and regular inspections. Sample tracking is handled by our LIMS system, which is connected to our laboratory service work, ensuring integrity of sample tracking and sample identification. Our biorepository group also handles sample collection kits, constructing kits with relevant tubes, accession sheets and barcode labels. The group also tracks expiration of tubes. Having a biorepository is also major advantage for serving the needs of clinical trials. It decreases costs, as there is lesser need for shipping samples. It mitigates the risk associated with sample transfer and handling. It simplifies trial management, fewer partners to manage. It simplifies chain of custody, sample transfer occurs under a single LIMS at a single site with teams that work together each day. It simplifies processing any sample repeats, no tracking, cost or risks associated with inter-company transfers. We can also supply sample collection kits complete with accession sheets and matched barcode labels.

Synonyms: Gene Logic Biorepository Biobanking

Resource Type: biomaterial supply resource, material resource, tissue bank
