Proper Citation: Inflammatory Breast Cancer Research Foundation (RRID:SCR_004898)

Description: The Inflammatory Breast Cancer Research Foundation is a non-profit corporation dedicated to the support of research and public awareness. It is dedicated to researching the cause of Inflammatory Breast Cancer, also known as IBC, an advanced and accelerated form of breast cancer usually not detected by mammograms or ultrasounds. Inflammatory breast cancer requires immediate aggressive treatment with chemotherapy prior to surgery and is treated differently than more common types of breast cancer. Our mission is to assist scientists and researchers in their quest to determine the definitive causes of inflammatory breast cancer. The Inflammatory Breast Cancer Research Foundation seeks to assist them in their work so effective and meaningful detection and diagnosis, prevention and treatment can be pursued and achieved. Our Goals Include: * To ignite interest in the study and research of inflammatory breast cancer at every level. From researchers to physicians, educators and scientists, the IBC Research Foundation seeks to support and inspire those seeking to identify the cause(s) of inflammatory breast cancer. * To support research, the purpose of which is to reach an unambiguous definition of inflammatory breast cancer. The clinical/pathological definition in use since the late 1800s with little change in the 1900s is ambiguous and doesn't result in a diagnosis of all cases of IBC. By using research methods available in the 21st Century, an unambiguous definition is now possible, assuring with high certainty that all cases of IBC will be correctly diagnosed, and possible sub-types of IBC identified, which may lead to better treatment outcomes. * To increase awareness of IBC for primary care physicians, nursing professionals, and medical technicians in order to minimize the time from presentation of symptoms to correct diagnosis of inflammatory breast cancer. * To increase public awareness in an effort to encourage women to seek medical attention for common inflammatory breast cancer symptoms soon after they appear and to empower patients, caregivers, families and friends to pursue meaningful paths in support of diagnosis and treatment of inflammatory breast cancer.

Abbreviations: IBC Research Foundation
