Proper Citation: Italian National Research Council (RRID:SCR_011322)

Description: A public organization whose duty is to carry out, promote, spread, transfer and improve research activities in the main sectors of knowledge growth and of its applications for the scientific, technological, economic and social development of the Country. To this end, the activities of the organization are divided into macro areas of interdisciplinary scientific and technological research, concerning several sectors: biotechnology, medicine, materials, environment and land, information and communications, advanced systems of production, judicial and socio-economic sciences, classical studies and arts. CNR is distributed all over Italy through a network of institutes aiming at promoting a wide diffusion of its competences throughout the national territory and at facilitating contacts and cooperation with local firms and organizations. From the financial point of view, the main resources come from the State, but also from the market: even 30% of its balance sheet, an extraordinary result, is the result of revenues coming from external job orders for studies and activities of technical advice as well as from agreements with firms, contracts with the European Union and with the other international organizations. One of CNR institutional duties is the carrying out of research activities in pursuit of excellence and strategic relevance within the national and international ambit, through its network of research institutes. The network of CNR research institutes, which are distributed all over the national territory, is multidisciplinary: it has competences in the field of health and biology, of computer science, of environment and climate, of chemistry and physics, of behavioral, economic and social sciences.

Abbreviations: CNR

Synonyms: Consiglio Nazionale delle Ricerche
