Proper Citation: Conquest DICOM software 1.4.15 (RRID:SCR_013513)

Description: Fast error free and transparent compression (>2x) of image data on disk with NKI private or JPEG compression. A database browser and slice viewer integrated in the PACS system with options for: viewing DICOM header, creating BMP files (ideal for slides), sending selected images, printing, database fix tools such as changing patient IDs, deleting and anonymizing studies and series, and splitting and merging series. Uses drag and drop to load DICOM and HL7 files. A simple query/move user interface for diagnostic purposes, to improve your knowledge of DICOM, and to grab missing data from another server. Elementary DICOM print server and client - prints to the default printer. Correct display of JPEG and RLE compressed images in browser. Flexible configuration of JPEG and NKI private compression with optional (de)compression of incoming, dropped, transmitted and archived files. The JPEG compression is done using executables from the OFFIS DICOM toolkit (DCMTK version 3.5.4), developed by Kuratorium OFFIS e.V. A simple DICOM Modality Worklist implementation with HL7 import with configurable translation. A CGI WEB interface with several possible viewers (especially important for the Linux version without a GUI). The server can act as an advanced scriptable DICOM image forwarder and/or DICOM image cache. The server integrates an advanced DICOM viewer based on K-PAC DICOM training and testing Demonstration and research image archives Image format conversion from a scanner with DICOM network access DICOM image viewing and slide making DICOM image selection, (limited) editing, and splitting and merging of series Advanced scriptable image modification, filtering, forwarding and conversion DICOM caching and archive merging DICOM web access for viewing and data management (scriptable)
