Proper Citation: Genetix: QPixII Colony Picking Robot (RRID:SCR_019959)

Description: QPixII offers high precision benchtop colony picking, gridding, and rearranging technology that has been specifically designed for high throughput genomics. It allows for automatic picking of 3500 colonies or plaques per hour. Constructed within a welded steel framework, the main bed is capable of holding 15 microtitre plates and 2 bioassay trays. The unit includes a sterilization bath and heated-air drier to ensure cleaning and drying of picking/gridding heads between the cycles. Colonies or plaques are visualized via CCD camera and picked from bioassay trays (QTrays) by a 96-pin picking head and inoculated into pre-filled 96 or 384 well QPlates. High accuracy picking, control and management at every step. Macroarrays are easily generated using the robots gridding software and accessories. Rearranging of clones can also be performed. The minimum computing requirements include Windows™ software and an Intel Pentium III processor (600 MHz), 128 MB of RAM, and a 4 MB, 256 color video card. The unit is supplied with two picking/rearranging heads, one gridding head, and QSoft software including picking, gridding, and rearranging modules. Dimensions: 56.30"w x 28.74"d x 31.50"h.

Resource Type: instrument resource

Keywords: Genetix, Colony Picking Robot, Instrument Equipment, USEdit

Availability: Commercially available

Resource Name: Genetix: QPixII Colony Picking Robot

Resource ID: SCR_019959

Alternate IDs: Model_Number_QPix II

Record Creation Time: 20220129T080347+0000

Record Last Update: 20260801T190649+0000

Ratings and Alerts

No rating or validation information has been found for Genetix: QPixII Colony Picking Robot.
