Description: Grayscale USB 3.0 microscope camera for routine fluorescence applications. You will receive crisp images due to its unique passive cooling architecture and its highly sensitive CCD sensor. Correlated pixel double sampling together with reduction of ambient temperature of the sensor offers exceptionally clear and noise-free signal. Its CCD sensor is particularly suitable for low light situations such as fluorescence and will capture even smallest amounts of light. Camera produces live images with up to 30 frames per second. The USB 3.0 interface provides for fast data transfer.
