Proper Citation: nTrackAnnotator (RRID:SCR_028789)

Description: Standalone, Windows-based software program designed to identify and annotate low-complexity purine and pyrimidine regions as well as user-defined nucleotide sequences within prokaryotic and eukaryotic genomes. It features a graphical user interface and performs rapid "one-go" genome analyses without requiring high-performance computing clusters. Software for detection and annotation of sequence tracks of chosen nucleic acid bases with defined length in genome. Used to identify low-complexity regions containing DNA sequences of selected nucleotide(s) and to annotate the data with the support of NCBI/Genome database.

Resource Type: standalone software, software application, software resource

Defining Citation: [DOI:10.1016/j.genrep.2017.01.004](https://doi.org/10.1016/j.genrep.2017.01.004)

Keywords: identify low-complexity regions containing DNA sequences, detection and annotation of sequence tracks, chosen nucleic acid bases, defined length in genome,
