Proper Citation: Ataxia-Telangiectasia Childrens Project (RRID:SCR_001671)

Description: The Ataxia Telangiectasia Children's Project, better known as the A-T Children's Project, was founded in late 1993 by a family in Florida with two young sons who have A-T. It is a public, tax-exempt, non-profit organization pursuant to Section 501(c)(3) of the Internal Revenue Code, and all gifts and donations to the Project are tax deductible. The A-T Children's Project was formed to raise funds through events and contributions from corporations, foundations and friends. These funds are then used to accelerate first-rate, international scientific research aimed at finding a cure and improving the lives of all children with ataxia-telangiectasia. - To encourage and support excellent laboratory research which will accelerate the discovery of a cure or possible therapies for ataxia-telangiectasia by: - awarding competitive research grants to top scientists using a peer-review board comprised of top scientists and physicians, - organizing and sponsoring workshops and symposiums in order to encourage cooperation among laboratories and to generate new research strategies, and - working with Congress and the National Institutes of Health to encourage the funding of active research on A-T by agencies of the U.S. government. - To improve the accurate and timely diagnosis of A-T patients by increasing public awareness and by educating physicians. - To develop and maintain an international patient registry of A-T patients with objective, neutral oversight, while leaving ultimate control in the hands of treating physicians, so that up-to-date clinical information about A-T patients can be obtained for researchers and so that when a treatment is developed, all patients can be reached through their physicians. - To support and oversee a clinical center and information clearinghouse at a top-rated, world-class medical center for the evaluation of A-T patients by a multidisciplinary team of specialists, and for the accumulation of experience in managing the many facets of A-T such as the ataxia, cancer and immune problems. - To develop quantitative endpoints for objectively measuring the progression rate and severity of the symptoms of A-T. - To maintain and enlarge a tissue/cell bank with objective, neutral oversight and control in order to ensure free access of existing and new researchers to A-T patient specimens. Sponsors: The A-T Children's Project is a non-profit organization that raises funds to support and coordinate

first-rate biomedical research projects, scientific conferences and a clinical center aimed at finding a cure or life-improving therapies for ataxia-telangiectasia, a lethal genetic disease that attacks children, causing progressive loss of muscle control, immune system problems, and a strikingly high rate of cancer, especially leukemia and lymphoma.

Synonyms: A-T Children's Project

Resource Type: topical portal, portal, disease-related portal, data or information resource

Keywords: education, funding, ataxia, ataxia telangiectasia, cancer, cell, cure, immune, international, laboratory, physician, research, scientific, scientist, telangiectasia, tissue, tissue bank

Availability: Free, Freely Available

Resource Name: Ataxia-Telangiectasia Childrens Project

Resource ID: SCR_001671

Alternate IDs: nif-0000-10158

Record Creation Time: 20220129T080208+0000
