Description: This is a topical portal dedicated to the communication of news, science, and information of interest to the brain mapping community, and to sharing and promoting the science of brain mapping. The purpose and goal of brain mapping is to advance the understanding of the relationship between structure and function in the human brain. Scientists in this field seek to gain knowledge of the physical processes that underly human sensation, attention, awareness and cognition. These results are immediately applicable to surgical intervention, to the design of medical interventions and to the treatment of psychological and psychiatric disorders.

Synonyms: brainmapping.org

Resource Type: portal, software resource, training resource, knowledge environment, community building portal, people resource, data or information resource

Keywords: function, attention, awareness, brain, brain mapping, cognition, cognitive neuroscience, human, journals, manufacturers, mri, mri safety, scientific societies, sensation, structure, subjects, neuroimaging, video
