Description: A quality-controlled directory of academic open access repositories that provides a simple repository list, and lets you search for repositories or search repository contents. Additionally, tools and support to both repository administrators and service providers in sharing best practice and improving the quality of the repository infrastructure are provided. The current directory lists repositories and allows breakdown and selection by a variety of criteria which can also be viewed as statistical charts. The underlying database has been designed from the ground up to include in-depth information on each repository that can be used for search, analysis, or underpinning services like text-mining.
