Proper Citation: CAGE Questionnaire (RRID:SCR_003702)

Description: 4-item questionnaire, where the name is an acronym of its four questions, that can indicate potential problems with alcohol abuse and has been extensively validated for use in identifying alcoholism. It has been determined that CAGE test scores ≥ 2 had a specificity of 76% and a sensitivity of 93% for the identification of excessive drinking and a specificity of 77% and a sensitivity of 91% for the identification of alcoholism. The most important question in the questionnaire is the use of a drink as an Eye Opener, so much so that some clinicians use a yes to this question alone as a positive to the questionnaire; this is due to the fact that the use of an alcoholic drink as an Eye Opener denotes abuse since the patient is going through withdrawal in the morning, hence the need for a drink as an Eye Opener.(Adapted from Wikipedia) Scoring: * 2 (or more) yes responses indicates the possibility of alcoholism
