Proper Citation: CREST (RRID:SCR_005257)

Description: An algorithm for detecting genomic structural variations at base-pair resolution using next-generation sequencing data. CREST uses pieces of DNA called soft clips to find structural variations. Soft clips are the DNA segments produced during sequencing that fail to properly align to the reference genome as the sample genome is reassembled. CREST uses the soft clips to precisely identify sites of chromosomal rearrangement or where pieces of DNA are inserted or deleted.

Abbreviations: CREST

Resource Type: software resource

Defining Citation: PMID:21666668

Keywords: genome, structural variation, next-generation sequencing, soft clip

Funding:

Resource Name: CREST

Resource ID: SCR_005257

Alternate IDs: OMICS_00312

Record Creation Time: 20220129T080229+0000

Record Last Update: 20250420T014247+0000

Ratings and Alerts

No rating or validation information has been found for CREST.

No alerts have been found for CREST.
