(RRID:SCR_005515)

Description: Network that brings together researchers in imaging genomics, to understand brain structure and function, based on MRI, DTI, fMRI and genomewide association scan (GWAS) data. The ENIGMA Network has several goals: * to create a network of like-minded individuals, interested in pushing forward the field of imaging genetics * to ensure promising findings are replicated via member collaborations, in order to satisfy the mandates of most journals * to share ideas, algorithms, data, and information on promising findings or methods * to facilitate training, including workshops and conferences on key methods and emerging directions in imaging genetics. Data sharing with other members of the ENIGMA Network is optional and by no means a requirement of joining the network. Genetics and Imaging Protocols are available.

Abbreviations: ENIGMA

Synonyms: Enhancing Neuro Imaging Genetics Through Meta-Analysis, ENIGMA Network

Resource Type: knowledge environment, narrative resource, data or information resource, experimental protocol

Keywords: mri, dti, fmri, genomewide association scan, imaging, genetics, genomics, brain, brain structure, brain function, application, clinical neuroinformatics, genetic association, genomic analysis, imaging genomics, imputation, loni pipeline, magnetic resonance, nifti, snp, gene
