Description: A production service that gives researchers the ability to create and manage long-term identifiers so that they can track usage, get credit for their work, share their data, and have the data reused for additional research. As a result, EZID identifiers also make it possible to increase citations, to build on previous work, to conduct new research, and avoid duplicating previous efforts. EZID identifiers provide a simple but powerful way to track research materials, including datasets, throughout their life cycle. In this way, researchers can share their data, get more citations, and track their results.
