Proper Citation: AlzGene: Field Synopsis of Genetic Association Studies in AD (RRID:SCR_006749)

Description: The AlzGene database provides a comprehensive, unbiased and regularly updated field synopsis of genetic association studies performed in Alzheimer's disease. In addition, hundreds of up-to-date meta-analyses are available for all eligible polymorphisms with sufficient data. In addition to identifying the epsilon4 allele of APOE and related effects, we pinpointed over a dozen potential Alzheimer disease susceptibility genes (ACE, CHRNA2, CST3, ESR1, GAPDH, IDE, MTHFR, NCSTN, PRNP, PSEN1, TF, TFAM and TNF) with statistically significant allelic summary odds ratios (ranging from 1.11-1.38 for risk alleles and 0.92-0.67 for protective alleles). Our database provides a powerful tool for deciphering the genetics of Alzheimer disease, and it serves as a potential model for tracking the most viable gene candidates in other genetically complex diseases.

Synonyms: Alzgene, AlzGene database

Resource Type: data or information resource, database

Defining Citation: [PMID:17192785](#)

Keywords: FASEB list

Funding: An anonymous donor ;
Cure Alzheimers Fund

Resource Name: AlzGene: Field Synopsis of Genetic Association Studies in AD

Resource ID: SCR_006749

Alternate IDs: nlx_33861

Record Creation Time: 20220129T080237+0000

Record Last Update: 20260905T133136+0000

Ratings and Alerts

No rating or validation information has been found for AlzGene: Field Synopsis of Genetic Association Studies in AD.

No alerts have been found for AlzGene: Field Synopsis of Genetic Association Studies in AD.
