**Proper Citation:** University of California, San Diego, Department of Pharmacology (RRID:SCR 007503)

Description: The Department of Pharmacology is renowned for its strength in elucidating basic cellular and molecular mechanisms of signal transduction that lead to drug target identification and ultimately to drug discovery. Many of the department's research efforts impact directly on human health, supported by NIH grants on hypertension, cardiovascular regulation, cancer, and neurological and inflammatory diseases. The department's research directions include computational and molecular science, catalyzed by the department's close affiliation with the San Diego Supercomputer Center, and structure guided drug design and bioinformatics. Cross campus efforts in environmental health sciences and pharmacogenomics have been launched through major NIH funded project grants. Appointments of adjunct faculty from the local biotechnology and pharmaceutical industry create a natural bond for cross fertilization and communication, bridging the department's basic science efforts, and enhances endeavors in drug discovery.
