Proper Citation: Summer Fellowships - Comparative Medicine (RRID:SCR_008306)

Description: The program seeks to help veterinary students become biomedical researchers. A secondary goal is to provide research experience to veterinary students interested in careers in laboratory animal medicine and/or pathology. Previous participants were veterinary students at Colorado State University, Cornell University, Kansas State University, Michigan State University, North Carolina State University, Ohio State University, Purdue University, Tufts University, Tuskegee University, University of California, University of Illinois, University of Tennessee, Washington State University, and Western University. The Program consists of workshops on research-related topics, a veterinary student journal club, sessions on research career development for veterinarians, an individual research project, and a veterinary student research symposium. The research project is the most important part of the Program. The goals of the research project are to have students address a significant experimental question, work independently and with other researchers, and produce and publish results. Students are matched with a preceptor (see list of faculty below) according to research interests. The preceptor outlines a focused project for the student to perform in their laboratory. Students become completely involved in their assigned laboratory participating in laboratory meetings and social events, attending seminars with other members of their laboratory, and working on their research project at least 40 hours/week.

Synonyms: Summer Fellowships
