Proper Citation: IUCN (RRID:SCR_012758)

Description: A global evaluation of the conservation status of plant and animal species. The IUCN Red List plays a prominent role in guiding conservation activities of governments, NGOs and scientific institutions. The introduction in 1994 of a scientifically rigorous approach to determine risks of extinction that is applicable to all species, has become a world standard. In order to produce The IUCN Red List of Threatened Species, the IUCN Global Species Programme working with the IUCN Survival Commission (SSC) and with members of IUCN draws on and mobilizes a network of scientists and partner organizations working in almost every country in the world, who collectively hold what is likely the most complete scientific knowledge base on the biology and conservation status of species. The IUCN Red List is underpinned by information management tools (the Species Information Service) which facilitate the collection, management and processing of species data from workshop to publication on The IUCN Red List.

Synonyms: The IUCN Red List of Threatened Species

Resource Type: data or information resource, portal, database, community building portal

Keywords: FASEB list

Resource Name: IUCN

Resource ID: SCR_012758

Alternate IDs: nlx_156898, r3d100010871

Record Creation Time: 20220129T080312+0000

Record Last Update: 20260812T044232+0000

Ratings and Alerts

No rating or validation information has been found for IUCN.

No alerts have been found for IUCN.
