Proper Citation: Material Safety Data Sheets for Infectious Substances of Canada (RRID:SCR_013003)

Description: Material Safety Data Sheets for chemical products are available to laboratory workers for most chemicals and reagents. However because many laboratory workers, whether in research, public health, teaching, etc., are exposed to not only chemicals but infectious substances as well, there was a large gap in the readily available safety literature for employees. These MSDS are produced for personnel working in the life sciences as quick safety reference material relating to infectious micro-organisms. The MSDS are organized to contain health hazard information such as infectious dose, viability (including decontamination), medical information, laboratory hazard, recommended precautions, handling information and spill procedures. The intent of these documents is to provide a safety resource for laboratory personnel working with these infectious substances. Because these workers are usually working in a scientific setting and are potentially exposed to much higher concentrations of these human pathogens than the general public, the terminology in these MSDS is technical and detailed, containing information that is relevant specifically to the laboratory setting. It is hoped along with good laboratory practices, these MSDS will help provide a safer, healthier environment for everyone working with infectious substances. The MSDS is ran by the Public Health Agency of Canada. The Public Health Agency of Canada (PHAC) is the main Government of Canada agency responsible for public health in Canada. PHACs primary goal is to strengthen Canadas capacity to protect and improve the health of Canadians and to help reduce pressures on the health-care system. To do this, the Agency is working to build an effective public health system that enables Canadians to achieve better health and well-being in their daily lives by promoting good health, helping prevent and control chronic diseases and injury, and protecting Canadians from infectious diseases and other threats to their health. PHAC is also committed to reducing health disparities between the most advantaged and disadvantaged Canadians. Because public health is a shared

responsibility, the Public Health Agency of Canada works in close collaboration with all levels of government (provincial, territorial and municipal) to build on each others skills and strengths. The Agency also works closely with non-government organizations, including civil society and business, and other countries and international organizations like the World Health Organization (WHO) to share knowledge, expertise and experiences.

Abbreviations: MSDS Canada

Resource Type: data or information resource, database

Keywords: chemical, chronic, decontamination, disease, dose, hazardous, health, health-care, human, infectious, injury, laboratory, life science, material, material safety data sheet, medical, micro-organism, msds, pathogen, research, safety, substance, toxicology databases, viability

Resource Name: Material Safety Data Sheets for Infectious Substances of Canada

Resource ID: SCR_013003

Alternate IDs: nif-0000-21275

Record Creation Time: 20220129T080313+0000

Record Last Update: 20260804T043507+0000

Ratings and Alerts

No rating or validation information has been found for Material Safety Data Sheets for Infectious Substances of Canada.

No alerts have been found for Material Safety Data Sheets for Infectious Substances of Canada.
