Proper Citation: Aging Dementia and Traumatic Brain Injury Study (RRID:SCR_014554)

Description: The Aging, Dementia and Traumatic Brain Injury Study is a detailed neuropathologic, molecular and transcriptomic characterization of brains of control and TBI exposure cases from a unique aged population-based cohort from the Adult Changes in Thought (ACT) study. The study contains six data sets: histology and immunohistochemistry, in situ hybridization, rna-seq, protein quantification by luminex, isoprostane quantification, and specimen metadata.

Synonyms: Aging Dementia and TBI Study

Resource Type: data set, data or information resource

Keywords: aging, dementia, traumatic brain injury, study, data set, histology, immunohistochemistry, in situ, hybridization, rna seq, protein quantification, isoprostane quantification, specimen, metadata, human

Related Condition: Aging, Dementia, Traumatic brain injury

Funding: Paul G. Allen Family Foundation

Availability: Available to the research community

Resource Name: Aging Dementia and Traumatic Brain Injury Study

Resource ID: SCR_014554

License URLs: <http://www.alleninstitute.org/legal/terms-use/>
