Proper Citation: Olympus: BH-2 Fluorescence Microscope (RRID:SCR_020338)

Description: Goal of the BH2 was superior optics and customizability, and it soon became very well known for both. Standard equipment on this microscope included 10x widefield high eyepoint eyepieces having a field number of 20, precentered halogen lamps, aspherical collector lenses, and fully enclosed light paths designed to exclude dirt and dust. Auxiliary components for the microscope included photoeyepieces, an automatic exposure photomicrography system, and a wide range of objectives covering the entire range of correction and magnification. In addition, both mechanical and circular stages were offered as were binocular and trinocular observation tubes. Contrast enhancing equipment included phase contrast, differential interference contrast, darkfield, fluorescence, and polarized light.

Resource Type: instrument resource

Keywords: Olympus, Fluorescence Microscope, Instrument Equipment, USEDit

Availability: Commercially available

Resource Name: Olympus: BH-2 Fluorescence Microscope

Resource ID: SCR_020338

Alternate IDs: Model_Number_BH-2

Record Creation Time: 20220129T080349+0000

Record Last Update: 20260801T190655+0000

Ratings and Alerts

No rating or validation information has been found for Olympus: BH-2 Fluorescence Microscope.

No alerts have been found for Olympus: BH-2 Fluorescence Microscope.
