Description: Software retrieval-augmented knowledge mining method with deep thinking LLMs for biomedical research and clinical support. Cross-document question answering dataset addressing current QA limitations, and features Progressive Retrieval-Augmented Reasoning framework that combines advanced retrieval-generation techniques with self-reflection mechanisms and deep-thinking large language models to enhance answer accuracy and contextual relevance. Used to evaluate latent knowledge retrieval and multi-hop reasoning capabilities.

Resource Type: source code, software application, software resource

Keywords: Progressive Retrieval-Augmented Reasoning, large language models, evaluate latent knowledge retrieval, evaluate multi-hop reasoning capabilities,
