(RRID:SCR_027271)

Description: Core provides collection, annotation, and storage solutions. This Biorepository is also home to a state-wide resource, the Biorepository Alliance of Georgia for Oncology (BRAG-Onc), which functions to collect samples from 6 participating sites across the State to represent the diversity of cancer patients within the State and to enhance cancer research in Georgia. Tissue specimens are fast-frozen in vapor phase liquid nitrogen to preserve their integrity and stored in large cryofreezers at -170 to -190°C. Blood is routinely separated into serum or plasma and buffy coats prior to freezing. Blood derivatives are stored at -70 to -80°C. The freezers are monitored constantly and are connected to an alarm system to ensure that the low temperatures are maintained.

Synonyms: Georgia Cancer Center Biorepository (GCCB)

Resource Type: service resource, access service resource, core facility

Keywords: ABRF, Biorepository Alliance of Georgia for Oncology, collect samples, cancer patients,

Resource Name: Augusta University Georgia Cancer Center Biorepository Core Facility
